

PASSIONATE ABOUT YOUR HEALTH AND SAFETY

At Compass Medical, we are passionate about your health and safety, which is why we practice under the American Cancer Society Guidelines stating;

Annual screening mammography should begin at age 40, unless a patient:

1. Has been irradiated for Hodgkin's disease.
2. Is a known carrier of BRCA mutations.
3. Has a first degree relative who was diagnosed with breast cancer in which case imaging can begin 10 years before the age of diagnosis of the relative but not before 25 years of age.
4. Has Li Fraumeni syndrome or other rare conditions associated with a high incidence of breast cancer.
5. Has breast lump or pain.

Always check with your doctor to see if a baseline mammogram is recommended before the age of 40.

OFFERING YOU MORE

Compass Medical Radiology Departments offer:

ACR accredited Digital Mammography

ACR accredited Digital Ultrasound

ACR accredited Cat Scan

Digital X-ray

Bone Density

**See back panel for specific services by location. Not all services offered at every location.*

RADIOLOGY AND IMAGING LOCATIONS AND SERVICES

Southeast Medical Center
One Compass Way | E. Bridgewater, MA
508.350.2200 ph | 508.350.2312 fax

*Not all services are offered on weekends.
Please call for full schedule.

East Bridgewater Radiology Services
ACR accredited Digital Mammography, ACR accredited Digital Ultrasound, ACR accredited Cat Scan, Digital X-ray and Bone Density

21 Bristol Drive | Easton, MA
508.565.7200 ph | 508.565.7240 fax

*Not all services are offered on weekends.
Please call for full schedule.

Easton Radiology Services
ACR accredited Digital Mammography, Digital Ultrasound, ACR accredited Cat Scan, Digital X-ray and Bone Density

8 Commerce Blvd. | Middleborough, MA
774.260.9200 ph | 774.260.9205 fax

*Not all services are offered on weekends.
Please call for full schedule.

Middleborough Radiology Services
ACR accredited Digital Mammography, Digital X-Ray, Digital Ultrasound and Bone Density

54 Miller Street, Suite 200 | Quincy, MA
617.481.3200 ph | 617.481.3205 fax

*Not all services are offered on weekends.
Please call for full schedule.

Quincy Radiology Services
ACR accredited Digital Mammography, Digital X-Ray and Digital Ultrasound

5 QUICK STEPS TO A SELF BREAST EXAM

Step 1: Begin by looking at your breasts in the mirror with your shoulders straight and your arms on your hips. Here's what you should look for: Breasts that are their usual size, shape, and color; Breasts that are evenly shaped without visible distortion or swelling

Step 2: Now, raise your arms and look for the same changes.

Step 3: While you're at the mirror, look for any signs of fluid coming out of one or both nipples (this could be a watery, milky, or yellow fluid or blood).

Step 4: Next, feel your breasts while lying down, using your right hand to feel your left breast and then your left hand to feel your right breast. Use a firm, smooth touch with the first few finger pads of your hand, keeping the fingers flat and together. Use a circular motion, about the size of a quarter. Cover the entire breast from top to bottom, side to side — from your collarbone to the top of your abdomen, and from your armpit to your cleavage. Follow a pattern to be sure that you cover the whole breast. You can begin at the nipple, moving in larger and larger circles until you reach the outer edge of the breast. You can also move your fingers up and down vertically, in rows. Be sure to feel all the tissue from the front to the back of your breasts: for the skin and tissue just beneath, use light pressure; use medium pressure for tissue in the middle of your breasts; use firm pressure for the deep tissue in the back. When you've reached the deep tissue, you should be able to feel down to your ribcage.

Step 5: Finally, feel your breasts while you are standing or sitting. Many women find that the easiest way to feel their breasts is when their skin is wet and slippery, so they like to do this step in the shower. Cover your entire breast, using the same hand movements described in Step 4.

WHAT TO EXPECT WHEN HAVING A MAMMOGRAM

Having a mammogram requires that you undress above the waist. Our facility will provide a wrap for you to wear.

A technologist will position your breasts for the mammogram. You and the technologist are the only ones in the room during the mammogram. The whole procedure takes about 20 minutes. The actual breast compression only lasts a few seconds.

Patient and Mammography Technologist

You may feel some discomfort when your breasts are compressed. If you are in pain, tell the technologist so she can try to make the compression more comfortable for you. If you are still having periods, try not to schedule your mammogram when your breasts are likely to be tender, as they may be just before or during your period.

All mammogram facilities are now required to send your results to you within 30 days. In most cases, you will be contacted within 5 working days if there is a problem with the mammogram.

DID YOU KNOW...
A Mammography screening is the best tool for detecting breast cancer at its earliest stage, up to two years before it is large enough to be felt, in women age 40 and older.

Self Exam Tip:

If you see any of the following changes, tell your doctor as soon as possible: **Dimpling, Puckering or Bulging of the skin, a Nipple that has changed position or an Inverted Nipple (pushed inward instead of sticking out), Redness, Soreness, Rash or Swelling.**

WHY COME TO COMPASS MEDICAL?

Compass Medical Radiology and Imaging offers comprehensive diagnostic imaging services supported through collaboration with Brigham and Women's Hospital Radiology Department. All exams are read by Brigham and Women's Board Certified Radiologists.

Compass Medical offers ACR accredited mammograms in East Bridgewater, Easton Middleborough and Quincy and is licensed by the state of Massachusetts and the FDA.

GET THE FACTS: MAMMOGRAPHY

Mammography involves a low-dose x-ray image of the breast. It is the best way to find breast cancer in its early, most treatable stage. The American Cancer Society recommends that all women receive annual mammograms after the age of 40.

WHAT'S THE DIFFERENCE?

Screening mammograms are done for women who have no symptoms of breast cancer. When you reach age 40, you should have a mammogram every year.

Diagnostic mammograms are done when a woman has symptoms of breast cancer or a breast lump. This mammogram takes longer than screening mammograms because more pictures of the breast are taken.

**In the event you are contacted for an additional test, please contact your insurance company to ensure your Diagnostic mammogram is covered.*
